

# DETECT Study Participants Needed

You may be eligible if you have:

**Pancreatic Cancer or Chronic Pancreatitis, AND  
have been diagnosed with Diabetes**

This research study—called the DETECT\* Study - is funded by the National Institutes of Health (NIH) and is seeking to develop a blood test that can separate diabetes caused by pancreatic cancer or chronic pancreatitis from type 2 diabetes. The study includes participants from 8 research centers in the United States.

**If you have pancreatic cancer or chronic pancreatitis, and have also been diagnosed with diabetes and are 40 to 85 years old, you may be eligible after review of other factors.**

**The study is completely voluntary. There is no cost to participate.**

**Participants will be compensated for their time.**

Participants will be asked to complete a questionnaire and give multiple blood samples over a two hour time period. There are no scheduled return visits.

**By participating in this study, you could help advance science and make a difference in the lives of future patients with these conditions.**
